Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 5, 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Karlsson (WO99/17007) in view of Masuda et al. (5,738,184).

Regarding claim 5, Karlsson disclose an engine muffler comprising: a first expansion chamber (Figs. 3) having a chamber gas inlet aperture connecting to an engine exhaust gas outlet (Fig. 3); a second expansion chamber (Fig. 3) having a chamber gas outlet aperture (the aperture at the end of 11); a first exhaust gas purifier (2) extending between the first and the second expansion chambers (Fig. 3); a first cover plate (18), which has an inlet aperture (19), covering an upstream portion of the first exhaust gas purifier in the first expansion chamber; and a second cover plate (Fig. 3), which has an outlet aperture (the aperture connected to 11), covering a downstream portion of the first exhaust gas purifier in the second expansion chamber.

The difference between Karlsson's muffler and claim 5 is that claim 5 recites a wall of at least one of the first expansion chamber and the second expansion chamber has a double wall construction with a predetermined gap interposed therebetween.

Masuda et al. teach a first expansion chamber having a double wall construction (36, 41) extended to the engine with a heat insulating plate (22) between the engine and the wall to which the engine is installed. It would have been obvious to one having

Art Unit: 2837

ordinary skill in the art to modify Karlsson's muffler as taught by Masuda et al. to include a double construction of the first and the second expansion chambers for the purpose of providing heat insulation.

Regarding claim 7, it is obvious that when there is no particular restriction existed in gas purification concentration degree, there is no need to apply a catalyst to the first exhaust gas purifier. The recitation appears to be related to a regulation rather than a structural limitation of an invention, therefore, does not carry any patentable weight.

Regarding claim 8, Karlsson discloses the claimed invention including the first cover plate and the partition are of a monolithic, one piece construction as shown in Fig. 1 except that the second cover plate is fastened to the partition with a bolt and a nut.

Masuda et al. teach fastening a partition plate (40) to the expansion chambers by bolt and nut (45) for being able to take apart. It would have been obvious to one having ordinary skill in the art to modify Karlsson's muffler as taught by Masuda et al. to fasten the second cover plate to the partition with a bolt and a nut for the purpose of being able to take apart.

3. Claims 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Karlsson in view of Funakoshi et al. (6,250,075) and Fischer et al.

Regarding claims 12 and 14, Karlsson discloses the claimed invention except that a second exhaust gas purifier provided in the first expansion chamber, and has an open end facing the engine exhaust gas outlet; wherein a wall of at least one of the first expansion chamber and the second expansion chamber has a double wall construction

Art Unit: 2837

with a predetermined gap interposed therebetween, wherein a heat insulating material is packed in the gap between the double wall..

Funakoshi et al. teach a second exhaust gas purifier (16) provided in the first expansion chamber and has an open end facing the engine exhaust gas outlet (Fig. 2).

Fischer et al. teach the side walls of the second expansion chamber being made of a double wall construction with a predetermined distance, and having a heat insulating material between them. It would have been obvious to one having ordinary skill in the art to modify Karlsson's muffler as taught by Funakoshi et al. and Fischer et al. to include a second exhaust gas purifier in the first expansion chamber, and the side walls of the second expansion chamber being made of a double wall construction with a predetermined distance, and having a heat insulating material between them for the purpose of providing high temperature resistant insulation.

Regarding claim 13 see statement addressed to claim 7.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Karlsson in view of Masuda et al. as applied to claim 5 above, and further in view of Fischer et al. (4,890,690).

Regarding claim 6, Karlsson in view of Masuda et al. disclose the claimed invention except a heat insulating material is provided in the gap between the double wall.

Fischer et al. teach a heat insulating material (32) being provided in the gap between the double wall (29) of a muffler (8). It would have been obvious to one having

Art Unit: 2837

ordinary skill in the art to modify Karlsson in view of Masuda et al's muffler as taught by

Fischer et al. to include a heat insulating material in the gap between the double wall for

the purpose of providing high temperature resistant insulation.

5. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Shih-yung Hsieh whose telephone number is 703-308-

1031. The examiner can normally be reached on 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Robert Nappi can be reached on 703-308-3370. The fax phone numbers

for the organization where this application or proceeding is assigned are 703-305-3431

for regular communications and 703-305-3431 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

0956.
